

Panel A: Endemic Richness ($R^2_{median} = 0.057$)

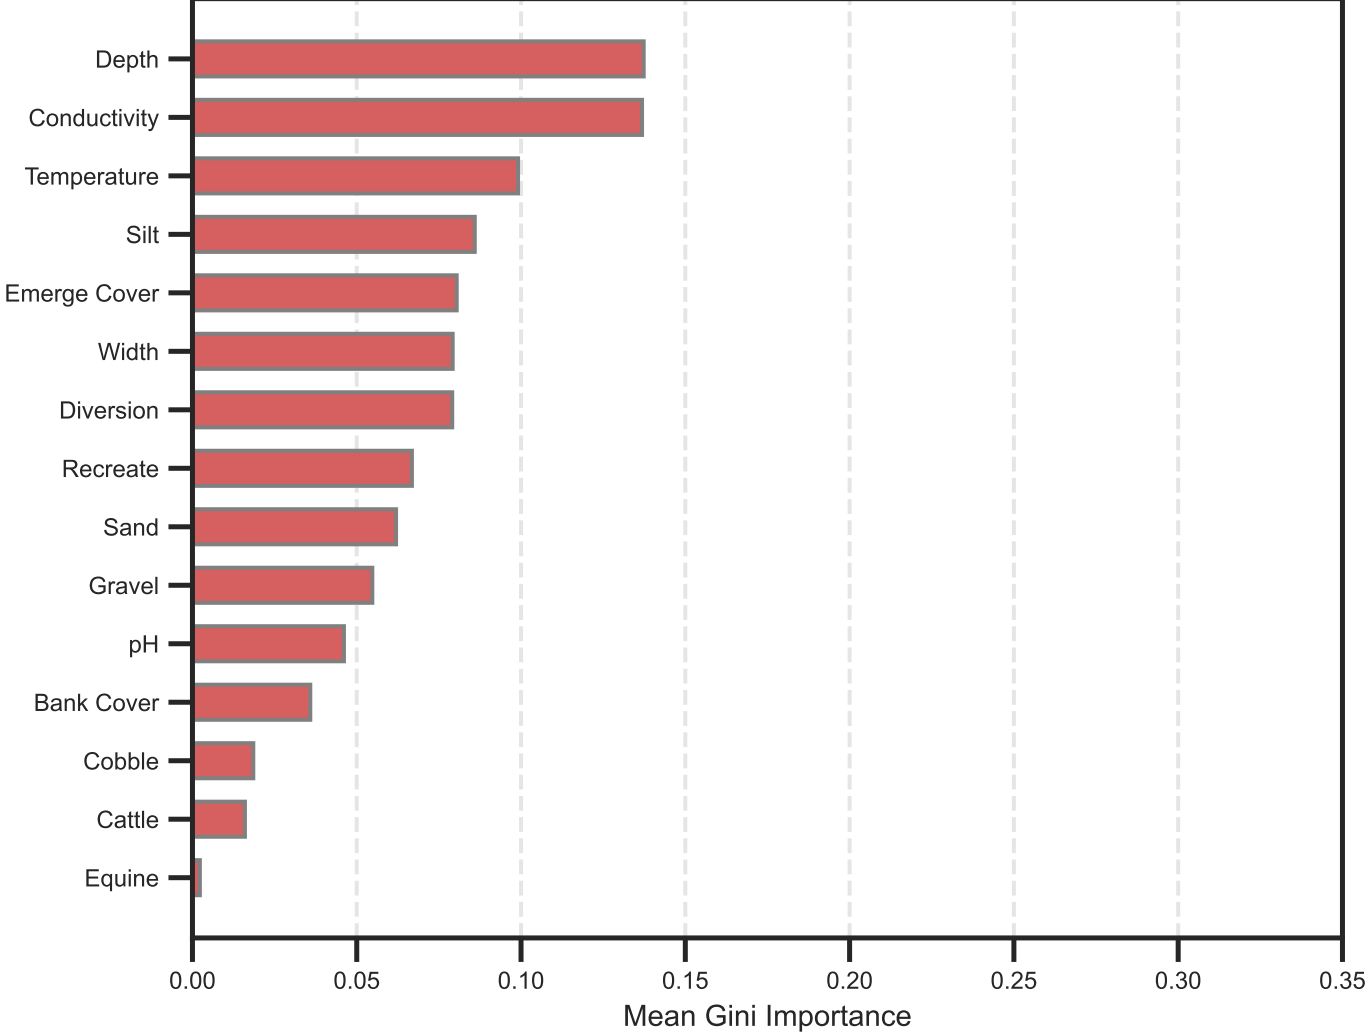

Panel B: Crenophile Richness ($R^2_{median} = 0.144$)

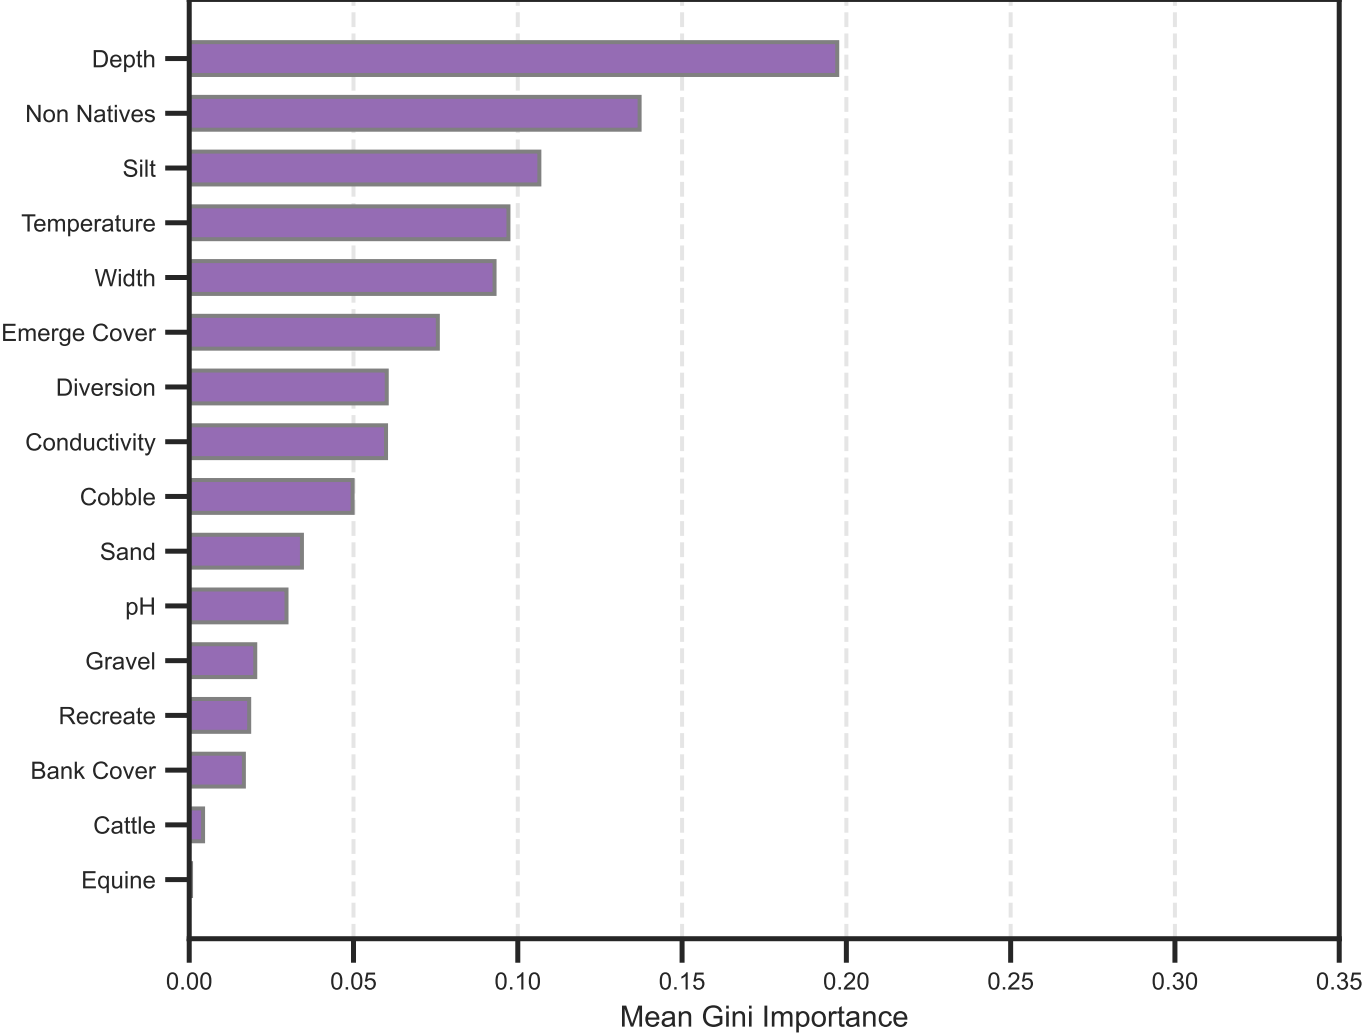

Panel C: Springsnail Richness ($R^2_{median} = -0.193$)

Panel D: Non-Native Richness ($R^2_{median} = 0.207$)

Panel E: Native Fish Richness ($R^2_{median} = 0.464$)

Statistical Summary (Regional Springs, N=45):

- Features are normalized via standard scaling.
- Random Forests fit with 100 trees, max depth = 4, max features = 'sqrt'.
- Metrics calculated over 1,000 bootstrap splits.
- Out-of-Sample validation uses out-of-bag (OOB) unseen validation folds.
